

PRTF | POWERED BY

ARCHITECTING ON

- The official AWS classroom course behind AWS Certified Solutions Architect – Associate (SAA-C03)

The cloud certification recruiters actually shortlist for, taught in person, on campus, through CloudThat, an authorized AWS Training Partner.

FIRST BATCH BEGINS

24 August 2026

AWS CURRICULUM

The official Architecting on AWS classroom track

IN-PERSON, 45+ HOURS

Classroom + 7 hands-on AWS labs · weekday & weekend batches

AWS-CERTIFIED TRAINER

Delivered end-to-end by CloudThat, an authorized AWS Training Partner

**ONLY
50
SEATS**

Everyone lists “cloud” on their CV...

You'll be the one who has actually built on it.

This is lab-first learning on live AWS infrastructure. You design the network, deploy the compute, wire the databases, and ship a highly available multi-tier architecture yourself – the same architecture pattern running behind most of the internet's production systems. That is what separates a cloud architect from someone who has watched cloud tutorials.

Why this certification matters

Your CV, upgraded

Architecting on AWS is the recognized preparation path for AWS Certified Solutions Architect – Associate, consistently ranked among the highest-value IT certifications in the world. The AWS name on your CV is legible to every technical recruiter on the planet.

Recruiters know the difference

Cloud roles are among the fastest-growing and best-paying technology jobs in India. Hiring managers can't verify a video playlist. They can verify an AWS credential in seconds.

The skill under every other skill

AI, data engineering, fintech, SaaS, all of it runs on cloud infrastructure. Cloud architecture is not one career path; it is the layer beneath most of them. Learn it once and it compounds across every technical role you ever hold.

Why this is a genuinely rare opportunity

This is the official Architecting on AWS classroom curriculum the same course enterprises pay premium corporate rates for – delivered in-person over 45+ hours on an AICTE-approved campus by CloudThat, an authorized AWS Training Partner. Not a video playlist or a crash course: every lab runs on live AWS infrastructure, mapped directly to the SAA-C03 certification blueprint – a credential verifiable on your CV for the rest of your career.

- ✓ Enrollment is capped at 50 students, deliberately small, so every participant gets dedicated lab time, direct trainer access, and individual architecture reviews.
- ✓ Exam vouchers worth 50% off the SAA-C03 certification fee are part of launch pricing – a benefit worth over ₹7,500 that won't repeat once the program scales.

ON COMPLETION

Every participant
earns the **AWS course
completion certificate.**

Complete the training and your Architecting on AWS course completion certificate is yours – no exam required. It carries the AWS training name on your CV from day one.

› INCLUDED FOR ALL

AWS course completion certificate

Issued on completing the authorized training program – the recognized preparation credential for the Solutions Architect – Associate track.

› OPTIONAL NEXT STEP

SAA-C03 certification exam : 50% off

Choose to appear for the exam afterwards at any Pearson VUE centre, and PRTF provides a voucher covering half the examination fee.

Everything included, built to justify every rupee

This isn't just a training fee. It's a fully supported, in-person learning experience designed so you show up and focus only on learning.

TRAINING & CERTIFICATION

01 The official AWS classroom curriculum

The complete Architecting on AWS course, all 13 modules from architecting fundamentals to backup and recovery, delivered across 45+ hours instead of the standard 24 hours compressed.

02 Taught end-to-end by CloudThat

An authorized AWS Training Partner, with an AWS-certified instructor.

03 7 hands-on labs on live AWS infrastructure

Including the capstone: designing and deploying your own highly available multi-tier architecture, with the instructor available for consultation like a real architecture review board.

04 ~45 contact hours

The extended format means every module gets classroom depth AND lab depth, not one or the other.

05 SAA-C03 exam blueprint mapping

Every module tagged to the certification domains, so classroom learning is exam preparation.

06 SAA-C03 exam voucher — 50% off **WORTH ₹7,500+**

PRTF provides a voucher covering half the certification examination fee (exam fee ~US\$150).

07 Regular assessments and daily doubt sessions

Bring your designs; they get critiqued, not just graded.

08 AWS course completion certificate

Issued on completing the authorized training. On your CV from day one, no exam required.

CAMPUS & INFRASTRUCTURE

- ✓ **State-of-the-art, air-conditioned classrooms** — a modern learning environment built for full-day focus.
- ✓ **Full campus access** — computer labs, library, and discussion rooms for group work and self-study.
- ✓ **Recreation spaces** — play rooms and breakout areas to recharge between intensive sessions.
- ✓ **Refreshments included daily** — one less thing to plan around during an intensive program.
- ✓ **Full welcome study kit by PRTF** — everything you need, ready on day one.
- ✓ **Hostel facilities available** for girl candidates from outside Greater Noida (on payment basis).

Everything included, built to justify every rupee

This isn't just a training fee. It's a fully supported, in-person learning experience designed so you show up and focus only on learning.

TRAINING & CERTIFICATION

01 The official AWS classroom curriculum

The complete Architecting on AWS course, all 13 modules from architecting fundamentals to backup and recovery, delivered across five immersive days instead of the standard compressed three.

02 Taught end-to-end by CloudThat

An authorized AWS Training Partner, with an AWS-certified instructor.

03 7 hands-on labs on live AWS infrastructure

Including the capstone: designing and deploying your own highly available multi-tier architecture, with the instructor available for consultation like a real architecture review board.

04 5 full days, ~45 contact hours

The extended format means every module gets classroom depth AND lab depth, not one or the other.

05 SAA-C03 exam blueprint mapping

Every module tagged to the certification domains, so classroom learning is exam preparation.

06 SAA-C03 exam voucher — 50% off **WORTH ₹7,500+**

PRTF provides a voucher covering half the certification examination fee (exam fee ~US\$150).

07 Regular assessments and daily doubt sessions

Bring your designs; they get critiqued, not just graded.

08 AWS course completion certificate

Issued on completing the authorized training. On your CV from day one, no exam required.

CAMPUS & INFRASTRUCTURE

- ✓ **State-of-the-art, air-conditioned classrooms** — a modern learning environment built for full-day focus.
- ✓ **Full campus access** — computer labs, library, and discussion rooms for group work and self-study.
- ✓ **Recreation spaces** — play rooms and breakout areas to recharge between intensive sessions.
- ✓ **Refreshments included daily** — one less thing to plan around during an intensive program.
- ✓ **Full welcome study kit by PRTF** — everything you need, ready on day one.
- ✓ **Hostel facilities available** for girl candidates from outside Greater Noida (on payment basis).

THE CURRICULUM

Your learning roadmap

The official AWS course outline, taught hands-on across 45+ classroom hours — and mapped to the **AWS Certified Solutions Architect – Associate (SAA-C03)** exam blueprint.

PHASE 01 FOUNDATIONS & SECURITY

HANDS-ON LAB

Drive AWS from the Management Console and Command Line

Architecting fundamentals

AWS services, global infrastructure, and the Well-Architected Framework: the design principles behind every production cloud system.

Account security

Principals, identities, security policies, and managing multiple accounts: locking the front door before you build the house.

Networking 1

IP addressing, VPC fundamentals, and traffic security: designing the private network your entire architecture lives inside.

PHASE 02 THE BUILDING BLOCKS

HANDS-ON LAB

Build your own Amazon VPC infrastructure, then add a live database layer

Compute

EC2 instances, instance storage, pricing strategy, and AWS Lambda: choosing the right compute for the right workload at the right cost.

Storage

S3, shared file systems, and data migration tools: where data lives and how it moves.

Database services

RDS, DynamoDB, caching, and migration: matching database engines to business needs instead of habit.

PHASE 03 SCALE & AUTOMATE

HANDS-ON LAB

Configure high availability in your Amazon VPC

Monitoring and scaling

Monitoring, alarms, load balancing, and auto scaling: architectures that grow and heal themselves.

Automation

CloudFormation and infrastructure-as-code: infrastructure you can rebuild with one command.

Containers

Microservices and AWS container services: portable, infrastructure-agnostic application environments.

- Networking 2

VPC endpoints, peering, hybrid networking, and Transit Gateway: connecting clouds, offices, and data centres.
- Serverless

API Gateway, SQS, SNS, Kinesis, Step Functions: event-driven systems with no servers to manage.
- Edge services

Route 53, CloudFront, DDoS protection, Outposts: fast and safe at global scale.
- Backup and recovery

Disaster planning, AWS Backup, recovery strategies: architectures that survive failure.

AWS course completion certificate in hand — exam-ready for SAA-C03.
All 13 official modules, 7 live labs, and a capstone multi-tier architecture you designed and deployed yourself.

LAB-FIRST BY DESIGN

Every phase pairs instruction with dedicated lab time on live AWS infrastructure. You don't watch demonstrations – you build the VPC, deploy the databases, configure the scaling, and ship the capstone architecture yourself. With 45+ classroom hours instead of the standard 24, the labs get the time they deserve. That's the depth that makes you a practitioner.

CERTIFICATION EXAM BLUEPRINT

SAA-C03 domain weights, from the official AWS exam guide

Design Secure Architectures	30%
Design Resilient Architectures	26%
Design High-Performing Architectures	24%
Design Cost-Optimized Architectures	20%

WHO THIS IS FOR

- ✓ Aspiring and working solutions architects and solution-design engineers
- ✓ Developers who want to understand how production cloud systems are designed
- ✓ Anyone targeting the AWS Certified Solutions Architect – Associate certification

RECOMMENDED BACKGROUND

- ✓ Familiarity with cloud computing concepts and general networking (IP addressing)
- ✓ The extended 45+ hour format gives foundations the time a compressed corporate batch never can

Why only 50 seats?

Because an architecture program is only as good as the review each design gets. With 50 seats, every participant gets dedicated lab time, direct access to the trainer, and a classroom where your architecture actually gets critiqued, not a lecture hall where you're one face in two hundred.

YOUR CREDENTIAL

This is what goes on your CV.

Architecting on AWS — official AWS classroom curriculum, delivered by an authorized AWS Training Partner. 7 hands-on AWS labs. Capstone: designed and deployed a highly available multi-tier architecture on AWS.

WHAT CHANGES ON YOUR CV

Not a certificate line. A projects section.

AWS Certified Solutions Architect – Associate (SAA-C03) — Architecting on AWS

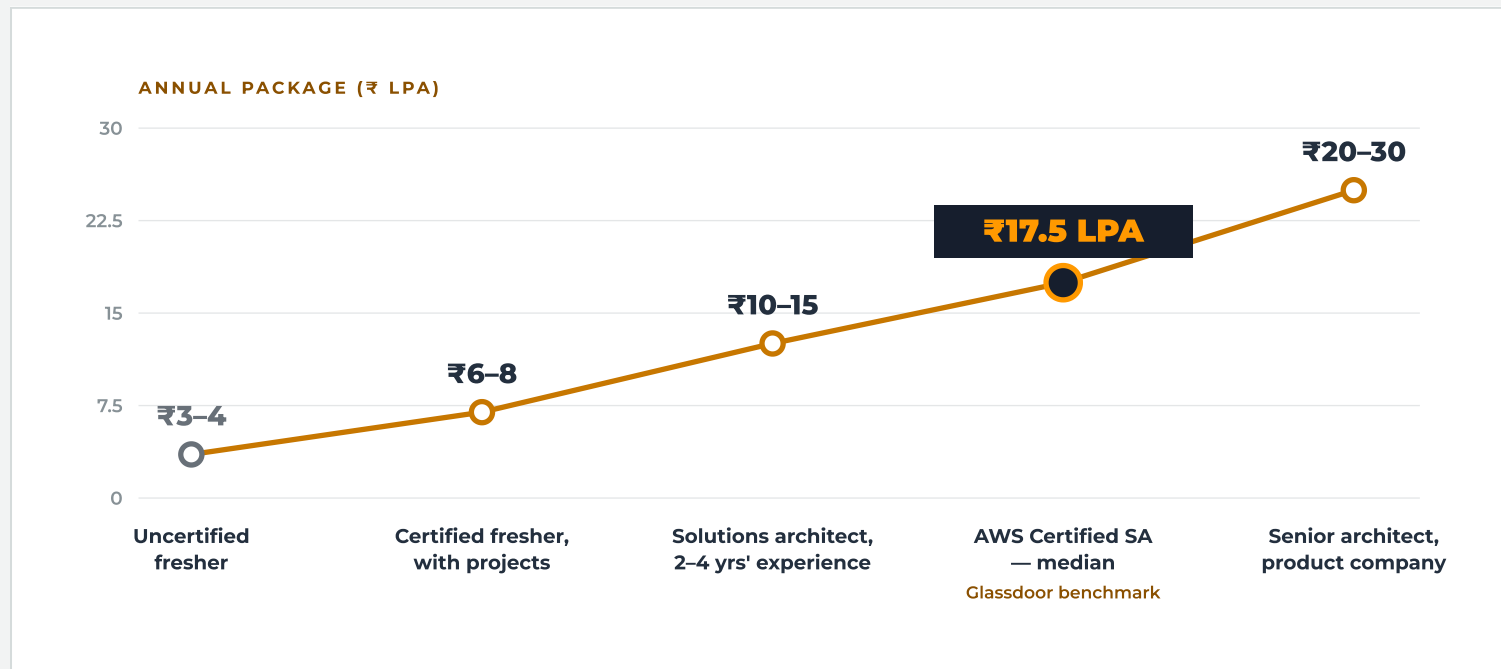

CloudThat, authorized AWS Training Partner · 45+ hours, 7 hands-on labs

- ✓ Designed and built a custom Amazon VPC from scratch, including subnetting and traffic security
- ✓ Deployed a live relational database layer (RDS) into the VPC and connected it to a compute tier
- ✓ Configured high availability with load balancing and auto scaling across multiple availability zones
- ✓ Built an event-driven serverless workflow using API Gateway, Lambda, and SQS/SNS
- ✓ Configured CloudFront and Route 53 for global content delivery and DNS routing
- ✓ Capstone: designed and deployed a highly available multi-tier architecture end-to-end on live AWS infrastructure

A certificate proves you attended. This proves you built. Most applicants have neither.

Where certification moves you on the ladder

The gap between a fresher and a certified fresher isn't experience — it's certification plus demonstrable projects. This is exactly what the program produces.

■ AWS certification correlates with a 20–30% salary uplift over uncertified peers.

The certificate is the credential. Placement support is the follow-through.

Every candidate who completes the programme enters the PRTF placement track, CV rebuild, mock interviews, and direct introductions to hiring partners recruiting for internship and full-time cloud roles.

01 PREPARE

CV and profile rebuild

Your CV, LinkedIn and portfolio rewritten around the architecture you actually shipped in the labs — not a certificate line.

02 PRACTISE

Mock interviews

One-to-one mocks on AWS fundamentals and scenario questions, plus aptitude and HR rounds, with written feedback and doubt sessions.

03 CONNECT

Interviews scheduled for you

Your profile circulated to PRTF hiring partners and recruitment consultancies; the placement cell books and follows up on every interview.

04 PLACE

Internship or job offer

Paid internship and entry-level cloud openings across the partner network, support continues until you convert an offer.

What the placement cell does for you

- ✓ A dedicated placement coordinator assigned to your batch
- ✓ Two rounds of mock technical interviews with feedback
- ✓ Profile circulated to hiring partners and consultancies
- ✓ CV, LinkedIn and project-portfolio review, one-to-one
- ✓ Aptitude and HR interview preparation sessions
- ✓ Interview scheduling, reminders and post-round follow-up

ROLES YOU'LL INTERVIEW FOR

- Cloud Support Associate
- Cloud Engineer — Trainee
- DevOps / Cloud Infrastructure Intern
- Solutions Architect — Associate track

Internship and entry-level cloud openings for students across our partner network in Delhi NCR and remote-first teams hiring nationally.

- **Placement assistance, stated honestly:** PRTF guarantees the preparation, the profile circulation and the interview access; not the offer. The offer you convert is yours.

Independent benchmark for equivalent authorized training:

~~₹60,000 — ₹1,10,000~~

Indian AWS Training Partner corporate rates, up to AWS's official classroom list price of US\$1,350.

Self-paced video courses alone sell for more than this, with no instructor, no labs, no classroom, and no AWS training credential.

PROGRAM FEE

₹14,999 inclusive of GST

Including 45+ hours of authorized AWS training, live labs, full campus access, and the 50% SAA-C03 exam voucher.

Two ways to attend

The same 45+ hours of authorized training, labs, and certification support choose the schedule that fits your week. Both batches begin **24 August 2026**.

WEEKDAY BATCH

Full-day immersive, Monday to Friday

Consecutive full-day sessions on campus – the fastest route through the complete 45+ hours. Ideal for students and professionals between roles.

WEEKEND BATCH

Saturday–Sunday, across weekends

The full 45+ hours spread over successive weekends, built for participants who can't step away midweek. Same instructor, same labs, same credential.

Questions, answered

Do I need a paid AWS account?

No all labs run on provided AWS infrastructure. You bring nothing but a laptop.

Do I need prior cloud experience?

Basic familiarity with networking and cloud concepts is recommended. The 45+ hour format gives foundational modules more classroom time than standard compressed corporate batches.

Is the certification exam included?

The AWS course completion certificate is included for every participant – no exam required. The SAA-C03 certification exam is optional, taken separately at any Pearson VUE centre, and PRTF provides a voucher covering 50% of the exam fee.

Who teaches the program?

Every session – weekday or weekend batch – is delivered by an authorized AWS Training Partner, through an AWS-certified instructor.

50 seats. One founding batch. **Reserve yours today.**

Scan the QR code or reach out to the PRTF admissions desk to secure your spot before enrollment closes.
